To achieve its goals the Foundation [7] intends to carry out a number of essential activities, including the following:

- To promote, establish and manage the Supercomputing Centre of Extremadura [8].
- To encourage the development of research projects [9] and technological development.
- To provide computing capacity, communications and technical support to users through the <u>equipment</u> [10] available at the Foundation.
- To help with the transfer of calculation research results [4] between public research centres and companies.
- To operate and share technologies developed by the Foundation.
- To promote the <u>cooperation</u> [11] between companies and institutions.
- To promote and collaborate in the organisation of courses, seminars and meetings [5].
- To compile and edit [6] books, magazines or multimedia material related to the Foundation's objectives.
- To seek and obtain resources for the development of its activities.
- To contribute to the development and strengthening of the competitiveness of the research communities in Extremadura and the business sector.
- To provide technological services where required to organisations and companies in the area of supercomputing.
- Any other activity considered relevant to the Foundation's objectives.
